OBJECTIVE

I want to work as a **Java backend developer** and build my career in that area. I am looking for a position where I can go deeper into the **Java and Spring** ecosystem, grow alongside the team and bring the company the experience I have already built in production.

PROFILE

I am **responsible, proactive, communicative and self-taught**. I own what I deliver from start to finish and keep my work organized. I like to take the lead in solving problems, work closely with the team and align ideas before executing. I learn quickly and study on my own the technologies I work with.

PROFESSIONAL SUMMARY

I currently work as a mid-level contract (PJ) developer at **LXTech (an authorized TOTVS channel)**. I am responsible for more than thirty projects in **Java, with Spring Boot**, in agribusiness production. I take part in the full cycle of every delivery, from gathering the requirement with the client to release and follow-up in production.

At LXTech I have been building my strongest technical and practical background in **Java and the Spring ecosystem**. I have also scaled my soft skills working under high demand with shifting priorities: tight deadlines and the constant need to take a position and align decisions with the team and the client.

Before that I interned at **Elring Klinger** and **CNH Industrial**, where I had my first contact with the routine of large companies and developed responsibility, organization and the attitude needed to position myself and add value to the team.

PROFESSIONAL EXPERIENCE

LXTech (authorized TOTVS channel)

Mid-level Java Backend Developer (contractor) · Nov 2024 – present

I develop and maintain more than thirty projects in **Java with Spring Boot** in production, management systems for agribusiness companies integrated with the TOTVS PIMS ERP, covering costs, cash flow, purchasing, suppliers, truck weighing and industrial production.

I build new features and REST APIs for the product modules, solve the problems reported by the consultants by investigating the cause in production and, when needed, join meetings with the client to align requirements.

I also handle data modeling and query optimization across three databases (PostgreSQL, Oracle and SQL Server), the integrations with SAP and other TOTVS systems, and the modernization of legacy systems. Every delivery goes through three environments, with code review, automated releases and services in Docker.

Technologies: Java, Spring Boot, Angular, PostgreSQL, Oracle, SQL Server, Docker, Git, CI/CD and AI assistants (Claude, Kimi) for productivity.

CNH Industrial

Project Management Intern · Jun 2022 – Jun 2024

Parts management in projects, from registration to supplier relations, automating controls and data analysis. Two years in a multinational that sharpened my responsibility, communication and teamwork.

Elring Klinger

Kaizen Intern · Mar 2022 – May 2022

Tracking of Kaizen requests and report automation. My first contact with a corporate environment and with communication across departments.

TECHNICAL SKILLS

Java and Spring: Java, Spring Boot 2 and 3, Spring Cloud, Spring Security, Spring Data with JPA/Hibernate, Maven, Gradle, REST APIs, microservices, RabbitMQ, JUnit, Mockito and Testcontainers.

Databases: PostgreSQL, MySQL, MongoDB, SQLite, Oracle and SQL Server, with data modeling, query optimization and versioned migrations (Flyway).

Tools: Docker, Git, GitHub Actions, Linux/VPS, Nginx, Playwright, Selenium and AI assistants (Claude, Kimi) for productivity.

Angular: Angular 17 to 22, TypeScript, PrimeNG, TailwindCSS and RxJS.

Python: FastAPI, Django REST and ETL.

EDUCATION

Computer Engineering · Escola de Engenharia de Piracicaba (EEP) · expected graduation: DEC/2026 (evening course).

LANGUAGES

Portuguese native. English advanced (Red Balloon, Cultura Inglesa and Wise Up).

PERSONAL PROJECTS - [GITHUB](#)

Monevas (PRIVATE) (hmg.monevas.com): financial management and stock portfolio control. It imports bank statements, organizes category-based planning and tracks stocks, REITs and BDRs, pointing out the best sectors and assets to invest in with AI support and analysis. **Technologies:** Java, Spring Boot, Angular, PostgreSQL, Docker, Git and VPS.

Monitorame (PRIVATE): a logistics system for fleets, deliveries and sensors. It computes the best path and tracks everything on real-time interactive maps. **Technologies:** Java, Spring Boot, Angular, PostgreSQL, Docker, Git and Playwright.

Lingua (PRIVATE): a language learning app with spaced repetition that shows each word at the right moment to review. It works with synthesized voice audio and speech recognition for pronunciation practice. **Technologies:** Java, Spring Boot, Angular, PostgreSQL, Docker and Git.

Activity Manager (PUBLIC): a time tracker that records where the user spends time on the computer and classifies activities automatically with AI. **Technologies:** Python, Linux, local AI and Git.
